US PAT NO: 4,774,680 L10: 1 of 4

ABSTRACT:

Disclosed . . . the oil/water mixture yields a current output which can be plotted on one of two distinct, empirically or theoretically derived, **data** curves. One of the **data** curves represents oil being in the continuous phase and the other **data** curve represents water being in the continuous phase. A **comparator** is used to determine whether the oil or the water is in the continuous phase to thereby select the proper **data**
30 SEP 91 08:13:31 U.S. Patent & Trademark Office P0034

US PAT NO: 4,774,680 L10: 1 of 4
curve on which the energy absorption is plotted. Each of the curves has the energy absorption properties of the media. . .

SUMMARY:

BSUM(5)

There are in the prior art a **number** of instruments which have been used to measure water content in an oil/water mixture. Most of such instruments in the . . .

SUMMARY:

BSUM(6)

00:SEP391 08:13:39 U.S. Patent & Trademark Office P0035

US PAT NO: 4,774,680 L10: 1 of 4

BSUM(6)

A relatively typical capacitance **probe** for use in determining oil/water ratios is found in U.S. Pat. No. 3,200,312 to Callahan. Callahan relies on the measurement of the mixture's dielectric constant. As such, the **probe** must be non-functional when water is in the continuous phase.

SUMMARY:

BSUM(7)

Yet another capacitance-type **probe** is taught in U.S. Pat. No. 3,025,464 to Bond. The Bond **probe** is designed specifically for pipeline use where there is typically low water content and oil is in the continuous phase. For that purpose, the Bond **probe** will function adequately. However, because
30 SEP 91 08:13:49 U.S. Patent & Trademark Office P0036

US PAT NO: 4,774,680 L10: 1 of 4

BSUM(7)

the Bond **probe** is a capacitance **probe**, it will not function in mixtures where water becomes the continuous phase.

SUMMARY:

BSUM(8)

Still another prior art capacitance probe is shown in U.S. Pat. No. 3,523,245 to Love et al. It has the same shortcomings as the prior art. . . . references mentioned above. In fact, FIG. 2 of the Love et al patent depicts a graph for water fraction versus probe capacitance. It is noted that the water fraction portion of the graph does not go above 0.5. In fact, the . . . that when the water fractions get above 0.5, the water tends to separate

US PAT NO: 4,774,680

L10: 1 of 4

BSUM(8)

out and the capacitance quickly approaches the value at free water.

SUMMARY:

BSUM(11)

Yet another net oil composition is described in U.S. Pat. No. 3,385,108 to Rosso. Rosso relies on a capacitance probe and does not teach the use of a digital linearizer or any means of overcoming the jump in the electrical.

SUMMARY:

30 SEP 91 08:14:07

U.S. Patent & Trademark Office

P0038

US PAT NO: 4,774,680

L10: 1 of 4

BSUM(12)

Another typical capacitance probe having the same inadequacies as those probes mentioned above is found in U.S. Pat. No. 3,006,189 to Warren et al.

SUMMARY:

BSUM(21)

Briefly . . . detailed description, claims and drawings set forth hereinafter. These features, objects and advantages are accomplished by utilizing a microprocessor or comparator circuit which is able to distinguish between oil being in the continuous phase and water being in the

30 SEP 91 08:14:16 U.S. Patent & Trademark Office P0039

US PAT NO: 4,774,680

L10: 1 of 4

BSUM(21)

continuous phase. . . .

SUMMARY:

BSUM(22)

As noted earlier, the step jump occurs in the data when the mixture changes over from oil being in the continuous phase to water being in the continuous phase. It is very desirable to eliminate this step jump from the data and to linearize the two distinct curves.

SUMMARY:

30 SEP 91 08:14:23

U.S. Patent & Trademark Office

P0040

US PAT NO: 4,774,680

L10: 1 of 4

It . . . a conductivity meter or energy absorption detector usually in units of milliamps of output. This information is fed to a comparator to select one of two memories, those being where water is in the continuous phase and where oil is in. . .

DRAWING DESC:

DRWD(2)

FIG. 1 is an elevational view of a probe and oil/water monitor as used in conjunction with the present invention.
